Foodservice Towels

Chicopee® : The support you need with clean confidence

For more than a century, the name Chicopee has been synonymous with unrivaled expertise in wiping applications and pioneering technologies.

Today, as a brand of Berry Global, Chicopee continues to uphold its legacy of innovation by bringing you a suite of product solutions for your specific foodservice operational needs. With innovative products engineered for cleaning and sanitizing, Chicopee's foodservice towels help support your needs for back-of-house, front-of-house, and restrooms. Whether you are looking for a more effective option to cotton towels or a more efficient option than paper towels, Chicopee has what you need. At Chicopee, we are committed to supporting your business with products that improve employee and customer health by helping to reduce the risks of foodborne illness outbreaks and Community Acquired Infections (CAI's), while improving productivity in a sustainable manner.

6 out of 10 customers agree, if a restaurant is clean, they go there more often.

"The Value of Clean: How Cleaning Improves Your Bottom Line."

Types of Cleaning

When it comes to cleaning and sanitizing, your standard operating procedures will help dictate the appropriate towel to use. It's important to consider the factors that impact the integrity of your towel from the amount of pressure applied during wiping, the concentration of sanitizer, the length of contact time, and the need for sanitizer compatibility, frequency of use and whether your towels require single-use or multi-day use. Chicopee Foodservice Towels offer a full selection of solutions for your needs.

Methods of Cleaning

Spray

sanitizing solution and wipe with dry towel

Soak

dry towel in open bucket with sanitizer

Wipe

with pre-saturated towel or saturate on-demand with towel in dispenser

Fog

mist or fumigate & wipe with towel (major outbreak cleaning)

Factors Impacting Your Cleaning Performance

- Ratio between sanitizer, detergent & towel
- Efficacy of sanitizer onto wiped surface
- Pressure applied during wiping
- Type & frequency of wiping action
- Nature & use history of surface
- Single shift or multi-day use (durability of towel)
- Wet or dry pick-up

Syed A. Sattar, PhD. Jean-Yves Maillard, PhD "The crucial role of wiping in decontamination of high-touch environmental surfaces: Review of current status and directions for the future."
Am J Infect Control. 2013 May. Print.

Cleaning Procedures

From healthier employees and improved productivity to overall business appearance, cleanliness equals a healthy environment that saves you money.

In a recent study, "Cleanliness" tops the list of importance when it comes to customer satisfaction and the cleaner a restaurant, the more frequently customers return. According to the CDC, half of the 48 million cases of foodborne illness in the U.S. each year originate in restaurant establishments. It's not enough to use a detergent-based cleaner. It is also important to make sure that enough sanitizer reaches the surface you're trying to clean. A well-known challenge of foodservice and health care industries is that cotton, viscose-based paper and nonwoven towels typically bind up to 40% of sanitizer solutions. A portion of the sanitizer is rendered unavailable to be applied to food contact surface increasing the risk for Health Code violations and foodborne illness

Poor cleaning procedures can cost a business 30% of revenue.

"The Value of Clean: How Cleaning Improves Your Bottom Line."
ISSA. Sept. 2014
www.issa.com/value-of-clean-whitepaper

The amount of norovirus particles that fit on the head of a pin would be enough to

Disinfectants are used at a higher concentration (higher level of ppm) with a longer dwell time (the time a disinfectant must sit on a surface in order to effectively kill germs and bacteria), whereas, sanitizers are used at lower concentrations (ranging from 200-400 ppm) for less dwell time. Both sanitizers and disinfectants are regulated by the U.S. Environmental Protection Agency (EPA). It's important to choose a compatible towel that offers the correct ration of solution thereby ensuring the right ppm. Disinfectant that is too concentrated can also cause illness in customers and workers.

How to Clean Surfaces Per FDA Food Code

Food Contact:
Three Pass Cleaning

Non-Food Contact:
One Pass Cleaning

Chicopee Difference

Superior sanitation, increased safety and customer satisfaction

Importance of sanitation in foodservice industry

The USDA has estimated that costs of foodborne illness are at a staggering \$6.9 billion annually¹. Even beyond the costs, consequences to the restaurants are far direr and long lasting. An outbreak due to poor hygiene could result in:

Lawsuits & legal fees

Negative media

Insurance premium increases

Staff absenteeism

Reduced revenue to even closure of business

A restaurant's hygiene depends on a numbers of factors. One of the most important contributing factors is sanitation of various surfaces in the restaurant. Sanitation standards for food contact and non-food contact surfaces are the reduction of contamination by 99.999% and 99.9% respectively.² To achieve this, various chemicals are used at specific concentrations and left on the surface for specific lengths of time.

Why use a sanitizer compatible towel?

Cotton, rental, and other non-woven towels may deplete sanitizer actives up to 40%³ and not release your sanitizer actives at required levels to the surface potentially putting your business at risk.

Chicopee's Sanitizer Compatible Towels are engineered to deliver your sanitizer actives to the surface helping reduce the risk of a foodborne illness outbreak at your operation.

64% of norovirus outbreaks from food contamination happen at restaurants¹

Most commonly used chemicals for sanitation are:

- Quaternary Ammonium Salts (Quats)
- Bleach (Sodium Hypochlorite)
- Hydrogen Peroxide

For more than a century, the name Chicopee has been synonymous with unrivaled expertise in wiping applications and pioneering technologies. Chicopee, a Berry Global brand, is vertically integrated and is the largest non-woven producer in the world. We are ideally suited to engineer a towel to support your critical business requirements in food safety.

At Chicopee, we are committed to supporting your business with products that help improve employee and customer health by helping to reduce the risks of foodborne illness outbreaks and Community Acquired Infections, while improving productivity in a sustainable manner.

Choosing the right towel for your cleaning procedures

How to test sanitizer active levels with your current towel versus Chicopee Sanitizer Compatible Foodservice Towels:

1. Dip towel into sanitizer solution
2. Wring solution out of towel into a clean bowl
3. Dip the test strip into the solution in bowl for 10 seconds, or recommended time from the manufacturer of the test strip
4. Compare the color of the test strip with the Parts Per Million color chart included with the test strip

What is the right towel for your cleaning procedure?

Whether you're a Full Service Restaurant or an Off-Premise Catering Company, choosing the right towel is critical to the wellbeing of your customers. Chicopee offers a full line of cleaning and sanitizing solutions for back-of-house, front-of-house, and restrooms. Here are some questions to keep in mind when choosing the right towel for your business:

"My towels smell like mildew."

Solution: We offer antimicrobial towels that reduce the growth of bacteria, mold, and mildew that cause odor.

"My health inspector deducted points because my sanitizer ppm was too low."

Solution: Chicopee offers four ranges of sanitizer compatible towels that do not deplete sanitizing solution.

"I need towels that last for different periods of time."

Solution: Chicopee offers a full range of towels that meet your durability needs.

"I need to make sure my employees are using the right towel in the right place."

Solution: Our towels are available in seven different colors to prevent cross-contamination

"I need to be able to clean my multi-day towels."

Solution: We have towels that can be cleaned in multiple ways.

Choose the right towel for your needs

Sanitizer Compatible Wiping Solutions

Cost effective, healthier environment, and improved customer satisfaction

CHIX® Sanitizer Compatible Towel

- Tri-Compatible- Quat, chlorine, and hydrogen peroxide
- Delivers full potency of sanitizer to surface
- Durable and abrasion resistant (5-7 days)
- Highly absorbent (9X its weight)
- Available in white, blue, red, and yellow for zone cleaning

CHIX® Pro-Quat® Towel

- Compatible with Quat
- Delivers full potency of sanitizer to surface
- Durable and abrasion resistant (5-7 days)
- Microban® Anti-microbial protection
- Available in white, blue, green, and red for zone cleaning

S.U.D.S.® Sanitizer Compatible Towel

- Compatible with Quat or Chlorine
- Delivers full potency of sanitizer to surface
- Single Use Dispensing System reduces chemical usage
- 9 out of 10 stores surveyed report greater customer satisfaction³
- Closed system may help reduce slip and fall hazards

CHIX® Multi-Day Towels

Super absorbent for efficient dirt pick up, multi-day use, and machine washable

CHIX® Foodservice Towel

Chix Standard Foodservice Towels give you the convenience of color-coded cleaning to reduce the risk of cross-contamination. Color coding allows you to designate one towel type for each area of your restaurant, which avoids the potential hazard of cleaning various surfaces (restroom vs. dining room) with the same towel. Available with or without Microban antimicrobial protection, these towels combat the growth of odor and stain causing bacteria, yeast, mold and fungi which means your towels stay cleaner, longer.

- Super Absorbent for Efficient Dirt Pick-Up
- Ribtech Pattern for Improved Scrub Ability
- Multi-Day Use & Machine Washable

The Workhorse of Foodservice Cleaning!

CHIX® Microfiber Light Cloths

Chix Microfiber Light Cloths provides the same superior cleaning performance as traditional woven microfiber cloths. Designed for short term use, it removes the need to launder microfiber saving time and costs.

- Reduce risk of cross-contamination through reduction of microbes on surface*
- Perfect for removing spots on glasses and silverware
- Low linting and streak-free performance

Usage

- Performs best when it is first rinsed and then wrung out.
- Be sure to rinse and wring the wipe often for best results.
- After machine-washing hang to dry or put in the dryer.

*3rd party testing demonstrated Microfiber Light Cloths to have a 99.99 removal of S.aureus and E. Coli from a stainless steel surface.

CHIX® Single Day Towels

Economical yet durable towels for your operation

CHIX® 3000 Compostable Foodservice Towels

Chix 3000 Compostable Foodservice Towels are the perfect solution for foodservice operators who value the performance and reusability of non-woven towels while reducing their environmental footprint. Constructed with a unique aperture and wavy pattern, a registered trademark of CHICOPEE, these lightweight towels effortlessly pick-up particles, rinse easily and dry quickly.

- Same Day Use
- Compostable Economical Choice
- Supports Green Initiative

CHIX 3000 meets DIN EN 13432 2000-12 Standards as tested by an external laboratory and carries the internationally recognized Seedling Logo, granted by DIN-CERTCO.

CHIX® Wet Wipes & All Day Towels

Chix wet wipes and all day towels are specifically designed for light-duty cleaning applications, thereby decreasing the overuse of paper towels and associated costs. are absorbent, limited-life towels for customers who simply want to dispose of them at the end of the day. Wet or dry, they're ideal for repeated use to wipe- up spills, clean tables, counters and appliances and offer an economic and efficient alternative to paper towels.

- Absorbent
- Reusable
- Dries Quickly
- Color Coded
- Convenient Packaging
