all- purpose organic absorbent

Better Than Clay

CornZorb has 200% more absorbent power than clay products.

All of the Benefits, None of the Risks

CornZorb doesn't contain the dangerous crystalline silica that clay does, so there's no special handling required. Further, because it's organic and biodegradable, CornZorb can be disposed of like regular trash.

Reduce, Reuse, Recycle

Made from a renewable resource, CornZorb is completely environmentally-friendly, organic and biodegradable. It's safe to use around food plant facilities and near children and pets.

Save Time, Save Money

Other absorbents are messy and hard on flooring. CornZorb is non-leaching and non-abrasive, which means that maintenance costs are low. Plus, it's lightweight so that shipping and disposal costs are near negligible.

Easy to Use

CornZorb is lightweight - easy to carry and easy to store. And cleanup is quick thanks to its powerful wicking action.

Stay Safe

Spills and slippery floors pose serious risks in the workplace, and are the cause of slip and fall injuries every year. Keep visitors and employees safe and insurance premiums low by using CornZorb.
