

MICROFIBER SELECTION GUIDE

COMPREHENSIVE

MICROFIBER SOLUTIONS

Rubbermaid Commercial Products offers high-quality and high-efficacy microfiber products that provide effective cleaning performance in any facility.

MICROFIBER EDUCATION

The science behind the power of microfiber and what sets Rubbermaid Commercial Products apart.

Pages 3–14

SURFACE CLEANING

A comprehensive selection of durable and disposable cloths for any type of facility need.

Pages 15–22

FLOOR CLEANING

A portfolio of mopping tools and accessories that drive productivity while helping to maintain a high level of clean.

Pages 23–48

PRODUCT CARE

Laundrying instructions to the ensure proper care of microfiber.

Pages 49–50

BREAKING THE CHAIN OF INFECTION

Understanding, and then breaking the chain of infection is critical to helping stop the spread of germs and bacteria.

THE AVERAGE DESK HAS
400x
 MORE GERMS THAN A TOILET SEAT*

AVERAGE LIFE EXPECTANCY IS
UP TO 48 HOURS
 FOR RESPIRATORY VIRUSES ON SURFACES²

OVER 90% OF AIRBORNE MICROORGANISMS IN BUILDINGS ARE DUE TO RESUSPENSION FROM FLOORS & OTHER SURFACES³

*The Independent, "Average desk contains 400x more germs than a toilet seat, new research reveals" | Collegebus.org, "Bacteria on Campus" | ISSA/CRI COVID-19 Symposium

HEALTH AND WELLNESS

Help improve cleaning efficacy by removing 99.77% or more of tested pathogens with water only¹.

PRODUCTIVITY

Combine multiple steps with cleaning tools that have been proven to decrease task time and reduce user effort.

SUSTAINABILITY

Have a positive impact on the environment by reducing water and chemical consumption by up to 95%².

COST IN USE

High-quality microfiber construction is proven to last up to 500 commercial launderings, and up to 200 launderings with bleach.

IMAGE

The highest quality fibers ensure that surfaces dry quickly without streaks or smudges.

A LEGACY OF INNOVATION

We lead the industry in durability across the entire microfiber portfolio, delivering the highest cleaning efficacy and high cost-in-use value for any facilities' cleaning needs.

¹Based on third-party testing on VCT surface with water only. | EPA Est. No. 52119-CNH-1
²Based on EPA's GreenSource Project Hospital Maps. | Usage: Microfiber Mops in Hospitals, November 2000. Page 3. Available at: www.epa.gov/osgjan09/wastep2/projects/hospitalmaps.pdf

UNDERSTANDING MICROFIBER

At its most basic, the term "microfiber" refers to a micro, or small, fiber made up of synthetic materials such as polyester, nylon or a combination of the two fibers.

The individual microfibers are knit together to form cleaning tools that are able to trap microscopic particles and liquids within the intricate network of small fibers far more efficiently than larger fibers.

[View our white paper, "Defining Microfiber: The HYGEN™ Difference"](#)

Unable to be seen by the eye, **one fiber measures less than one denier**, the measurement for the linear weight or mass density of fibers.

HOW SMALL IS ONE STRAND OF MICROFIBER?

Images below are magnified to demonstrate size comparisons.

HOW IS MICROFIBER MADE?

All microfiber begins with extrusion, which is the process of the shaping of a substance by forcing it through a mold.

HOW DOES MICROFIBER WORK?

MICROSCOPIC FIBERS
Fibers trap microscopic particles, microbes, and liquids far more effectively than larger fibers by penetrating into the tiny grooves and crevices on a surface.

STATIC CHARGE
Most dust, dirt and bacteria have a negative charge and are naturally attracted to the positive static charge of the microfiber.

COTTON FIBERS
Cotton fibers are too large to fit into the tiny grooves and crevices, pushing around particles but not picking them up.

VS.

USE STAIRS

WHAT'S THE DIFFERENCE

Synthetic polymers are what provide microfiber with some of its defining features, but how many times the fiber is split determines its cleaning performance.

COTTON

Cotton fibers are too large to clean in crevices where bacteria, spores and viruses hide.

MONOFILAMENT MICROFIBER

Monofilament fibers are about half the size of cotton and effectively clean in crevices where bacteria, spores and viruses hide.

SPLIT-BLENDED MICROFIBER

Split-blended microfiber has the smallest fiber size which further increases the surface area of the cloth for a superior clean.

CLEAN, THEN DISINFECT

The CDC specifically states that “cleaning is the necessary first step in any sterilization or disinfection process”¹, given that disinfectants work most efficiently when they come into direct contact with the microorganisms they are trying to kill¹.

 [View our White Paper, “Two-Steps for a Reason: the Case for Cleaning Prior to Disinfection”](#)

The physical action of scrubbing removes substantial numbers of microorganisms.¹

When microorganisms are trapped in dirt, then direct contact with disinfectants can't occur.^{1,2}

Microfibers have sharp edges that remove microbes from surfaces “like a carpenter’s plane, peeling off surface deposits”,³ that can be missed by disinfectants.

One-step cleaner-disinfectants are tested with the U.S. EPA in the presence of only 5% organic matter on surface. However, if a surface exceeds that level, the product will no longer be effective.⁴

TYPES OF MICROFIBER CLOTHS & PADS

Selecting the best microfiber product for a facility will depend on laundering capabilities, cleaning processes and the surfaces that need to be cleaned.

DISPOSABLE MICROFIBER

Single-use microfiber is best used in high-risk or high-touch areas, or if laundering is not available.

DURABLE MICROFIBER

Use a launderable microfiber cloth for routine cleaning, color-coded cleaning, and if commercial laundering is available.

SPECIALTY MICROFIBER

Specialty microfiber is designed for specific uses like glass and mirror cleaning, dry dusting or heavy duty scrubbing for tile and grout.

NOT ALL MICROFIBER IS CREATED EQUAL

Studies published in peer-reviewed literature have demonstrated significant variability among different microfiber products in terms of absorbency, cleaning efficacy and microbial removal.

GRAMS PER SQUARE METER (GSM)

A measurement of the weight of a fabric. Higher GSM fabrics are typically thicker, more absorbent and more durable than lower GSM fabrics.

KNITTING PATTERNS

Knitting patterns impact the overall look and feel of a product and can affect durability, performance and intended use of the product.

LAUNDRY PERFORMANCE

Products that can withstand the CDC guidelines of using hot water and bleach are more effectively cleaned during laundering to help prevent cross-contamination and re-contamination of surfaces.

REMOVAL OF HARMFUL PATHOGENS

Third-party testing from an accredited laboratory is a critical step to help ensure products have been confirmed to remove harmful pathogens.

QUAT BINDING

Quat binding occurs when the common class of disinfectant, quaternary ammonium compounds, binds to product fibers. Quat binding occurs with all split-blended microfiber due to the nylon content, but the binding is significantly less than traditional products made with cotton. Polyester fibers do not bind with quat.

COMPOSITION

SPLIT-BLENDED MICROFIBER

The percentage of strands successfully split during the splitting process is critical to cleaning performance. Splitting creates 16 separate fibers which increases the surface area to optimize the capture of debris and microbes and absorption of liquids.

MONOFILAMENT MICROFIBER

While no splitting occurs in monofilament microfiber, it still provides better cleaning performance than cotton. Monofilament microfiber made of 100% polyester is quit safe and often used in disposable products.

THE HYGEN™ DIFFERENCE

Third-party microbe removal testing

Split-blended microfiber products are split 16 times in over 95% of the strands

Dedicated in-house textiles engineer to support product development

10 unique microfiber tests performed on all products to ensure high-quality and performance

Launched to industry standards using CDC guidelines of hot water and bleach

¹Smith DJ, Galandres S, Hobbs JT, Gush C. Assessing the efficacy of different microfiber cloths at removing surface micro-organisms associated with healthcare-associated infections. J Hosp Infect 2011; 78(3): 182-6.

HYGEN™ DISPOSABLE MICROFIBER

Single-use microfiber that is proven to remove to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 19

HYGEN™ DURABLE MICROFIBER

Premium, 16-split blended microfiber that is proven to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 20

LIGHT COMMERCIAL MICROFIBER

A versatile cleaning cloth for everyday use that has been proven to remove 99.7% or more of tested bacteria¹ with water only.

P. 21

SPECIALTY MICROFIBER

Specially-designed microfiber cloths are constructed to meet the needs of specific tasks, such as glass and mirror cleaning.

P. 22

SURFACE CARE

Viruses, such as influenza, can survive on surfaces and infect a person for up to 48 hours², making it important to clean high-touch surfaces such as doors, tables, light switches, and railings on a daily basis.

¹Based on third party testing on VCT surfaces with water only. EPA, Est. No. 921105, CHL-1
Tested Viruses: Polio, Calicivirus, **Tested Bacteria:** *Staphylococcus aureus* (MRSA), *Pseudomonas aeruginosa*
²CollegeState.org, "Bacteria on Campus"

SURFACE CARE 101

The Association for Healthcare Environment (AHE) recommends the below best practices to help with optimal environmental cleaning and disinfection.

1 Clean from the cleanest surfaces in the room to the dirtiest

2 Clean from the top of the room to the bottom so that microbes and dirt fall to the ground

3 Wipe in one direction as it helps ensure solution is applied to the entire surface, and areas are not re-contaminated

4 Clean from the outside walls of the room to the center of the room

MAXIMIZE SURFACE CLEANING

The eight-sided fold methodology for microfiber cloths helps maximize surface cleaning, while minimizing the risk of spreading dirt and debris across multiple surfaces.

BEGIN with open, clean microfiber cloth

FOLD microfiber cloth in half

FOLD microfiber cloth in quarters

CLEAN surfaces with two exposed sides of cloth

OPEN microfiber cloth once to change sides

REFOLD to expose two fresh cleaning sides

OPEN cloth fully once four sides have been used

REPEAT steps 2 through 7 to use all eight sides

COLOR CODING

Color is also a visually effective way to prevent cross-contamination.

The below colors are commonly used within different areas of a facility per industry guidelines.

A **B** **C** **D**

- A** Specialty Areas
- B** General Use
- C** Bathroom
- D** High-Risk Areas

FLOOR CARE 101

When cleaning floor surfaces, the “figure-8” motion is recommended to prevent cross-contamination and keep track of dirty and already cleaned surface.

FLOOR CARE PROCESS

Using the right process when cleaning floors helps prevent cross-contamination throughout a facility and protects floors from damage.

- 1 Check the floor for debris and use a scraper if needed before beginning.
- 2 Use microfiber dust pad and begin dust mopping from the entrance door working backwards. Dust mopping is important to maintain floor finish and shine.
- 3 Place wet floor sign on ground to alert patrons of wet floors, and to help prevent slips and falls.
- 4 Use microfiber mop pad with floor cleaning solution as recommended per chemical specified guidelines.
- 5 Begin mopping at the opposite end of the door or furthest point in room, and use a “figure 8” motion.

COLOR CODING

Using the same color mop pads as cloths helps to create a consistent approach in avoiding cross contamination.

- A General Purpose
- B Bathrooms
- C High Risk Areas

DUST MOP PADS

Dusting is an important first step of floor care as it removes dust, dirt and debris prior to wet mopping.

ANATOMY OF A WET PAD

HYGEN™ Microfiber Wet Mop Pads are constructed of premium, 16-split nylon/polyester blend microfiber that provides high-efficacy wet mopping performance.

FACE MATERIAL

- Split microfiber is tested to remove 99.7% of tested virus and bacteria with water only.*
- Optimized material construction helps clean effectively while allowing the mop pad to glide across floors.
- Bleach resistant to ensure mops can be effectively laundered to help reduce the risk of cross-contamination.

INNER LAYERS

- Absorbent inner layers help hold enough solution to clean up to 250 sq. ft.

BACKING

- Industry-leading durable backing secures mop to frame to keep mop pad in place while mopping.
- Withstands chlorine bleach and extreme heat for superior durability ensuring pad securely attaches to frame throughout the product's life.

EDGE TAPE

- Durable edge helps retain mop shape with use over time.

HYGEN™ PULSE CADDY

HYGEN™ CHARGING BUCKET

The Charging Bucket charges the microfiber mop pads with cleaning chemicals and is designed to prevent oversaturation. It is compatible with HYGEN™ microfiber mop pads and the HYGEN™ Quick-Connect tools.

ADD water and/or cleaning solution to the Charging Bucket. The bucket design features an internal measuring guide to prevent oversaturation.

SECURE leak-proof lid to the Charging Bucket by snapping the end and side tabs into place.

FLIP the Charging Bucket upside down and leave it upside-down for 5-10 minutes. The mops are now ready to use.

FG090888Y00

Designed for RCP Cleaning Carts

REDUCE CROSS-CONTAMINATION

- All-plastic sealable bucket holds 10–20 microfiber wet mop pads and 50 disposable pads
- Each mop holds enough liquid to clean up to 250 sq ft

20 wet mop pads
15 wet mop pads
10 wet mop pads

PRODUCT CARE

Please reference CDC guidelines for laundering and cleaning microfiber cloths and pads as it is essential to ensuring the life span and efficacy of the fibers.

GETTING STARTED:

-  **CLEAN** the laundry machines daily, before the first use.
-  **SEPARATE** Microfiber cloths and mops from other textiles.
-  **WASH** Microfiber cloths and mops in the Mesh Laundry Net to manage inventory.
-  **DETERMINE** detergent and maximum load size using chart below.*

DETERGENT AND LOAD SIZE BY MACHINE

| WASHER SIZE | MAX VOLUME | DETERGENT LOAD** | 18" MOPS PER LOAD |
|-------------|------------|------------------|-------------------|
| 60 lbs | 71.8 gal | 1.5 oz | 130 |
| 81.6 lbs | 97.8 gal | 2.0 oz | 175 |
| 101.4 lbs | 121.3 gal | 2.5 oz | 220 |
| 125 lbs | 150.6 gal | 3.1 oz | 270 |
| 141.4 lbs | 169.6 gal | 3.5 oz | 305 |
| 174.8 lbs | 201 gal | 4.5 oz | 375 |

LAUNDRY INSTRUCTIONS

COMMERCIAL WASHING: HOT WATER METHOD

- Wash in hot water (160°F/71°C) for 25 minutes
- Use detergent and load size by machine guide to select appropriate capacity setting
- Use bleach if necessary

COMMERCIAL WASHING: COLD WATER METHOD

- Wash in cold water
- Use detergent and load size by machine guide to select appropriate capacity setting
- Bleach is required at 50-150ppm†

COMMERCIAL DRYING

- Dry cloths and mops on low heat (130°F/54°C) setting
- Store dry cloths and mops in clean Rubbermaid Cube Truck

REQUIRED CARE

- Do not store cloths and mops in a washing machine overnight
- Do not use fabric softener in the wash cycle
- Do not use dryer sheets in the dry cycle
- Do not wash cloths and mops with other textiles

TRANSPORTATION

CONTAMINATED TEXTILES

- Don personal protective equipment (PPE) before transferring soiled textiles into laundry machine
- Handle contaminated textiles carefully to avoid agitation
- Sort soiled microfiber from other textiles at the point of contamination using the Mesh Laundry Net
- Transport soiled textiles to the laundry with black Cube Truck with Cover

CLEAN TEXTILES

- Remove dry textiles from the dryer immediately
- Transport clean textiles in a properly cleaned blue Cube Truck with Cover or X-Cart with Cover
- Store clean textiles for only short periods of time. Wrap clean textiles for long-term storage
- Distribute textiles back into facility

OR

*Machine settings can be established by chemical provider.
**Represents 1/3 the average manufacturer's detergent recommendation. Using full amount of detergent can result in heavy floors.
†Follow manufacturer instructions for bleach use.

Always follow the protocol as directed by your facility manager.
Per CDC Guidelines for healthcare facilities.
Follow manufacturer instructions for bleach use.
