

MICROFIBER SELECTION GUIDE

COMPREHENSIVE

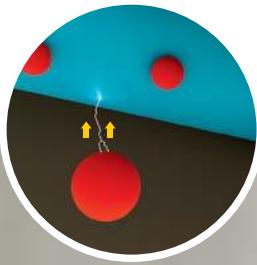

MICROFIBER SOLUTIONS

Rubbermaid Commercial Products offers high-quality and high-efficacy microfiber products that provide effective cleaning performance in any facility.

MICROFIBER EDUCATION

The science behind the power of microfiber and what sets Rubbermaid Commercial Products apart.

Pages 3–14

SURFACE CLEANING

A comprehensive selection of durable and disposable cloths for any type of facility need.

Pages 15–22

FLOOR CLEANING

A portfolio of mopping tools and accessories that drive productivity while helping to maintain a high level of clean.

Pages 23–48

PRODUCT CARE

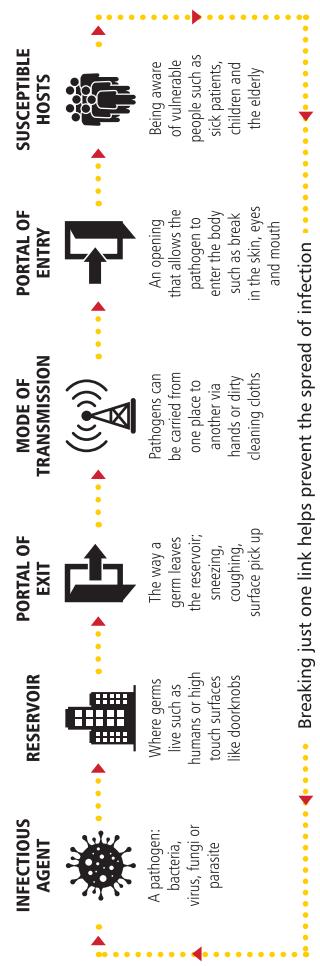

Laundering instructions to the ensure proper care of microfiber.

Pages 49–50

BREAKING THE CHAIN OF INFECTION

Understanding, and then breaking the chain of infection is critical to helping stop the spread of germs and bacteria.

THE AVERAGE DESK HAS
400X
MORE GERMS THAN A TOILET SEAT¹

AVERAGE LIFE EXPECTANCY IS
UP TO 48 HOURS
FOR RESPIRATORY VIRUSES ON SURFACES²

OVER 90% OF AIRBORNE MICROORGANISMS
IN BUILDINGS ARE DUE TO
RESUSPENSION FROM FLOORS & OTHER SURFACES³

¹The Independent, "Average desk contains 400x more germs than a toilet seat, new research reveals" | ²CollegeSists.org, "Bacteria on Campus" | ³ISSACIRI COVID-19 Symposium

HEALTH AND WELLNESS

Help improve cleaning efficacy by removing 99.7% or more of tested pathogens with water only¹.

PRODUCTIVITY

Combine multiple steps with cleaning tools that have been proven to decrease task time and reduce user effort.

SUSTAINABILITY

Have a positive impact on the environment by reducing water and chemical consumption by up to 95%.²

COST IN USE

High-quality microfiber construction is proven to last up to 500 commercial launderings, and up to 200 launderings with bleach.

IMAGE

The highest quality fibers ensure that surfaces dry quickly without streaks or smudges.

A LEGACY OF INNOVATION

We lead the industry in durability across the entire microfiber portfolio, delivering the highest cleaning efficacy and high cost-in-use value for any facilities' cleaning needs.

Based on third-party testing on YCT Surface with water only | EPA Est. No 32100-CHM-1
Environmental Protection Agency, Environmental Best Practices in Health Care Facilities: Using Microfiber Mops in Hospitals,
November 2002. Page 1. Available at: www.epa.gov/region02/waste/p2/projects/hospitalmops.pdf

UNDERSTANDING MICROFIBER

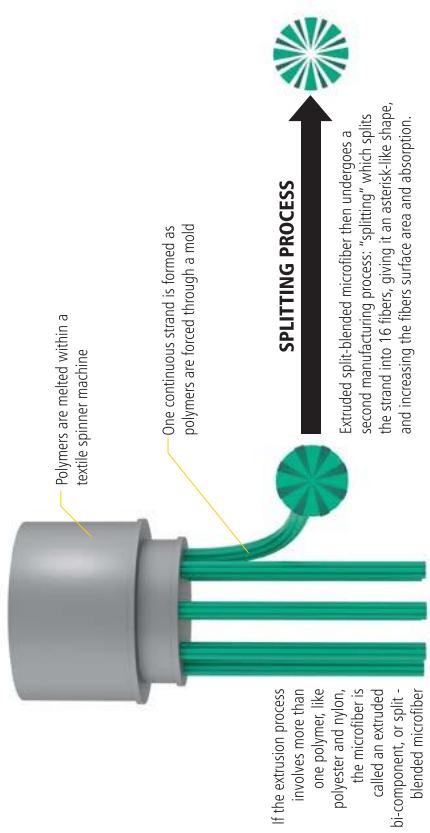

At its most basic, the term "microfiber" refers to a micro, or small, fiber made up of synthetic materials such as polyester, nylon or a combination of the two fibers.

The individual microfibers are knit together to form cleaning tools that are able to trap microscopic particles and liquids within the intricate network of small fibers far more efficiently than larger fibers.

[View our white paper, "Defining Microfiber: The HYGEN™ Difference"](#)

HOW IS MICROFIBER MADE?

All microfiber begins with extrusion, which is the process of shaping a substance by forcing it through a mold.

HOW DOES MICROFIBER WORK?

HUMAN HAIR	COTTON FIBER	MONOFILAMENT MICROFIBER	BACTERIA	SPLIT-BLEND MICROFIBER	VIRUS
•	•	•	•	•	•

HOW SMALL IS ONE STRAND OF MICROFIBER?

Images below are magnified to demonstrate size comparisons.

COTTON FIBERS	Cotton fibers are too large to fit into the tiny grooves and crevices, pushing around particles but not picking them up.
STATIC CHARGE	Most dust, dirt and bacteria have a negative charge and are naturally attracted to the positive static charge of the microfiber.

WHAT'S THE DIFFERENCE

Synthetic polymers are what provide microfiber with some of its defining features, but how many times the fiber is split determines its cleaning performance.

COTTON

Cotton fibers are too large to clean in crevices where bacteria, spores and viruses hide.

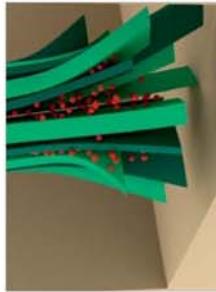

MONOFILAMENT MICROFIBER

Monofilament fibers are about half the size of cotton and effectively clean in crevices where bacteria, spores and viruses hide.

SPLIT-BLENDED MICROFIBER

Split-blended microfiber has the smallest fiber size which further increases the surface area of the cloth for a superior clean.

TYPES OF MICROFIBER CLOTHS & PADS

Selecting the best microfiber product for a facility will depend on laundering capabilities, cleaning processes and the surfaces that need to be cleaned.

CLEAN, THEN DISINFECT

The CDC specifically states that “cleaning is the necessary first step in any sterilization or disinfection process” given that disinfectants work most efficiently when they come into direct contact with the microorganisms they are trying to kill¹.

View our White Paper, “Two-Steps for a Reason:
the Case for Cleaning Prior to Disinfection”

When microorganisms
are trapped in dirt,
then direct contact
with disinfectants
can't occur.^{1,2}

Micofibers have sharp edges that remove microbes from surfaces “like a carpenter’s plane, peeling off surface deposits,” that can be missed by disinfectants.

DISPOSABLE MICROFIBER

Single-use microfiber is best used in high-risk or high-touch areas, or if laundering is not available.

DURABLE MICROFIBER

Use a launderable microfiber cloth for routine cleaning, color-coded cleaning, and if commercial laundering is available.

SPECIALTY MICROFIBER

Specialty microfiber is designed for specific uses like glass and mirror cleaning, dry dusting or heavy duty scrubbing for tile and grout.

²Minnesota Department of Health, Evaluation of Sanitizers and Disinfectants for Surfaces. 2017. Available from: <https://www.health.state.mn.us/communityenvironment/disinfectants/reviews.pdf>

Micofibers are ultra-fine cloths, their physical characteristics, cleaning effect, abrasion on surfaces, friction, and wear resistance. Stein K. Hassla, « Inge Dahl, Ole Ingensøren, Thomas Schmidlin

Norwegian Building Research Institute, P.O. Box 123, Blidtem, N-4014 Oslo, Norway

National Institute of Occupational Health, Test Pakke 105, DK-2100 Copenhagen, Denmark Received 25 May 2001; revised in revised form 16 August 2001; accepted 3 December 2001

San Francisco Department of the Environment, Safe Practices and Products for Disinfecting and Sanitizing Surfaces, https://sfenvironment.org/sites/default/files/sites_sfenv_in_safe_products_and_practices_for_disinfecting.pdf

⚠ One-step cleaner-disinfectants are tested with the U.S. EPA in the presence of only 5% organic matter on surface. However, if a surface exceeds that level, the product will no longer be effective.⁴

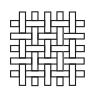

NOT ALL MICROFIBER IS CREATED EQUAL

Studies published in peer-reviewed literature have demonstrated significant variability among different microfiber products in terms of absorbency, cleaning efficacy and microbial removal.

GRAMS PER SQUARE METER (GSM)

 A measurement of the weight of a fabric. Higher GSM fabrics are typically thicker, more absorbent and more durable than lower GSM fabrics.

KNITTING PATTERNS

 Knitting patterns impact the overall look and feel of a product and can affect durability, performance and intended use of the product.

LAUNDERING PERFORMANCE

 Products that can withstand the CDC guidelines of using hot water and bleach are more effectively cleaned during laundering to help prevent cross-contamination and re-contamination of surfaces.

REMOVAL OF HARMFUL PATHOGENS

 Third-party testing from an accredited laboratory is a critical step to help ensure products have been confirmed to remove harmful pathogens.

QUAT BINDING

 Quat binding occurs when the common class of disinfectant, quaternary ammonium compounds, binds to product fibers. Quat binding occurs with all split-blended microfiber due to the nylon content, but the binding is significantly less than traditional products made with cotton. Polyester fibers do not bind with quat.

COMPOSITION

MONOFILAMENT MICROFIBER

 While no splitting occurs in monofilament microfiber, it still provides better cleaning performance than cotton. Monofilament microfiber made of 100% polyester is quat safe and often used in disposable products.

SPLIT-BLENDED MICROFIBER

 The percentage of strands successfully split during the splitting process is critical to cleaning performance. Splitting creates 16 separate fibers which increases the surface area to optimize the capture of debris and microbes and absorption of liquids.

THE HYGEN™ DIFFERENCE

Laundered to industry standards using CDC guidelines of hot water and bleach

10 unique microfiber tests performed on all products to ensure high-quality and performance

Dedicated in-house textiles engineer to support product development

Third-party microbe removal testing

Smith DL, Gillanders S, Holah T, Gush C. Assessing the efficacy of different microfiber tools at removing surface microorganisms associated with healthcare-associated infections. J Hosp Infect 2011; 78(3): 182-6.

SURFACE CARE

HYGEN™ DISPOSABLE MICROFIBER

Single-use microfiber that is proven to remove to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 19

HYGEN™ DURABLE MICROFIBER

Premium, 16-split blended microfiber that is proven to remove 99.7% of tested pathogens¹ with water only, including OC-43, a coronavirus belonging to the same genus as SARS-CoV-2.

P. 20

LIGHT COMMERCIAL MICROFIBER

A versatile cleaning cloth for everyday use that has been proven to remove 99.7% or more of tested bacterial² with water only.

P. 21

SPECIALTY MICROFIBER

Specially-designed microfiber cloths are constructed to meet the needs of specific tasks, such as glass and mirror cleaning.

P. 22

¹Based on third party testing on VCT surfaces with water only. EPA, etc. No. 2100-CHW1. ²Tested Virus: Feline Calicivirus. Tested Bacteria: *Candidatus difficile* (C. diff), Methicillin resistant *Staphylococcus aureus* (MRSA), *Pseudomonas aeruginosa*. ³College of Dentistry, "Bacteria on Campus"

SURFACE CARE 101

The Association for Healthcare Environment (AHE) recommends the below best practices to help with optimal environmental cleaning and disinfection.

MAXIMIZE SURFACE CLEANING

The eight-sided fold methodology for microfiber cloths helps maximize surface cleaning, while minimizing the risk of spreading dirt and debris across multiple surfaces.

COLOR CODING

Color is also a visually effective way to prevent cross-contamination.
The below colors are commonly used within different areas of a facility per industry guidelines.

A B C D

- 1 BEGIN with open, clean microfiber cloth
- 2 FOLD microfiber cloth in half
- 3 FOLD microfiber cloth in quarters
- 4 CLEAN surfaces with two exposed sides of cloth
- 5 OPEN microfiber cloth once to change sides
- 6 REFOLD to expose two fresh cleaning sides
- 7 OPEN cloth fully once four sides have been used
- 8 REPEAT steps 2 through 7 to use all eight sides

- 1 Clean from the cleanest surfaces in the room to the dirtiest
- 2 Clean from the top of the room to the bottom so that microbes and dirt fall to the ground
- 3 Wipe in one direction as it helps ensure solution is applied to the entire surface, and areas are not re-contaminated
- 4 Clean from the outside walls of the room to the center of the room

Based on third-party testing on VCT surface with water only | EPA Est. No 22100-CHE-1
Tested Bacteria: Clostridioides difficile (C. diff), Methicillin-resistant Staphylococcus aureus (MRSA), Pseudomonas aeruginosa

FLOOR CARE 101

When cleaning floor surfaces, the “figure-8” motion is recommended to prevent cross-contamination and keep track of dirty and already cleaned surface.

FLOOR CARE PROCESS

Using the right process when cleaning floors helps prevent cross-contamination throughout a facility and protects floors from damage.

- 1 Check the floor for debris and use a scraper if needed before beginning.
- 2 Use microfiber dust pad and begin dust mopping from the entrance door working backwards. Dust mopping is important to maintain floor finish and shine.
- 3 Place wet floor sign on ground to alert patrons of wet floors, and to help prevent slips and falls.
- 4 Use microfiber mop pad with floor cleaning solution as recommended per chemical specified guidelines.
- 5 Begin mopping at the opposite end of the door or furthest point in room, and use a “figure 8” motion.

COLOR CODING

Using the same color mop pads as cloths helps to create a consistent approach in avoiding cross contamination.

- A** General Purpose
B Bathrooms
C High Risk Areas

DUST MOP PADS

ousting is an important first step of floor care as it removes dust, dirt and debris prior to wet mopping.

ANATOMY OF A WET PAD

HYGEN™ Microfiber Wet Mop Pads are constructed of premium, 16-split nylon/polyester blend microfiber that provides high-efficacy wet mopping performance.

FACE MATERIAL

- Split microfiber is tested to remove 99.7% of tested virus and bacteria with water only.*
- Optimized material construction helps clean effectively while allowing the mop pad to glide across floors.
- Bleach resistant to ensure mops can be effectively laundered to help reduce the risk of cross-contamination.

INNER LAYERS

- Absorbent inner layers help hold enough solution to clean up to 250 sq ft.

BACKING

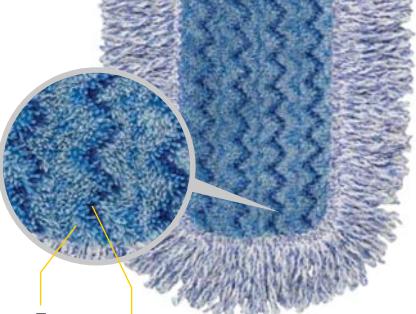

- Industry-leading durable backing secures mop to frame to keep mop pad in place while mopping.

EDGE TAPE

- Durable edge helps retain mop shape with use over time.

QUICK-CONNECT HANDLES & FRAMES

HANDLES

Quick-Connect handles makes cleaning an efficient task in every area of the facility. The unique connection mechanism allows for easy, quick tool exchange.

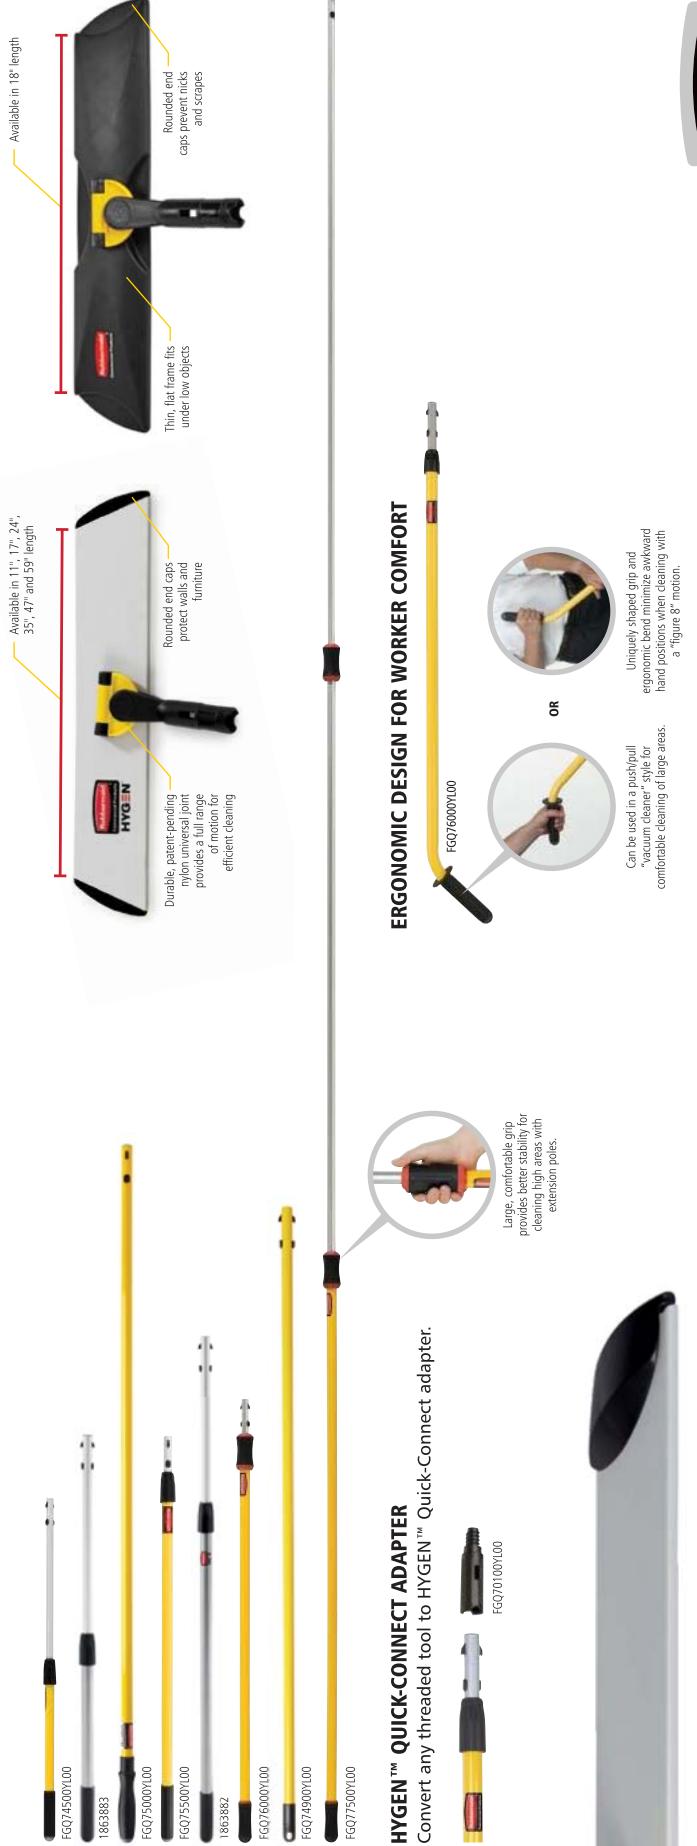

FRAMES

Quick-Connect Frames feature a flat profile that slides easily under furniture and equipment. The trapezoidal shape improves cleaning in corners and other hard-to-reach areas.

HYGEN™ QUICK-CONNECT ADAPTER

Convert any threaded tool to HYGEN™ Quick-Connect adapter.

FGQ70100Y000

ERGONOMIC DESIGN FOR WORKER COMFORT

FGQ76000Y000

FGQ74500Y000

Large, comfortable grip provides better stability for extension poles.

Can be used in a push/pull "vacuum clean" style for comfortable cleaning of large areas.
Uniquely shaped grip and ergonomic bend to minimize awkward hand positions when cleaning with a figure 8 motion.

SPRAY MOPS

Spray Mopping helps to cover more square feet in less time than traditional mopping systems.

HYGEN™ PULSE™ MICROFIBER SPRAY MOP SYSTEM

3486108	Light Commercial Microfiber Spray Mop	Yellow	52" x 4.5" x 3.5"	1

WHERE TO USE

(PULSE & LIGHT COMMERCIAL)	SPRAY MOPS	CHARGING BUCKETS FOR PADS	ADAPTABLE MOP WITH MOP BUCKET
Ergonomic trigger handle evenly dispenses three sprays of cleaner.	Light duty cleaning smaller areas Touch-up/quick cleaning spill clean-up (no bucket required)	High-risk areas to reduce cross-contamination	Heavy duty cleaning large areas Rinsing/wringing with mop bucket
Unscrew the cap to manually refill or connect to the PULSE Caddy hose for automatic refills.			

HYGEN™ PULSE CADDY

Clean up to 10,000 sq ft

1835528

HYGEN™
PULSE MOP

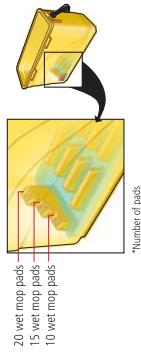

1835528

REDUCE CROSS-CONTAMINATION

- All-sealable bucket holds 10–20 microfiber wet mop pads and 50 disposable pads
- Each mop holds enough liquid to clean up to 250 sq ft

HYGEN™ CHARGING BUCKET

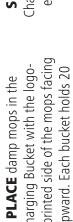

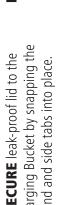

The Charging Bucket charges the microfiber mop pads with cleaning chemicals and is designed to prevent oversaturation. It is compatible with HYGEN™ microfiber mop pads and the HYGEN™ Quick-Connect tools.

HYGEN™ MICROFIBER PAD CHARGING BUCKET

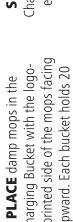

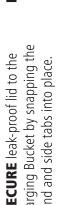

NO.	DESCRIPTION	COLOR	L × W × H	PACK QTY
FGC95088YL00	HYGEN™ Microfiber Pad Charging Bucket	Yellow	23.88" × 9.50" × 13.63"	3
1863892	Executive Series™ HYGEN™ Microfiber Pad Charging Bucket	Gray	23.88" × 9.50" × 13.63"	3
FGC95088YL00	HYGEN™ Microfiber Pad Press/Wring Bucket	Yellow	14.50" × 20" × 16.10"	1

WHERE TO USE

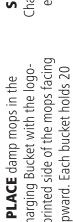

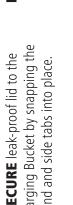

SPRAY MOPS (PULSE & LIGHT COMMERCIAL)	CHARGING BUCKETS FOR PADS	ADAPTABLE MOP WITH MOP BUCKET
Light duty cleaning smaller areas Touch-up/quick cleaning, spill clean-up (no bucket required)	High-risk areas to reduce cross-contamination	Heavy duty cleaning large areas Rinsing/wringing with mop bucket

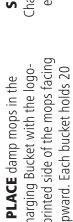

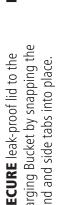

ADD water and/or cleaning solution to the Charging Bucket. The bucket design features an internal measuring guide to prevent oversaturation.

SECURE leak-proof lid to the Charging Bucket by snapping the end and side tabs into place.

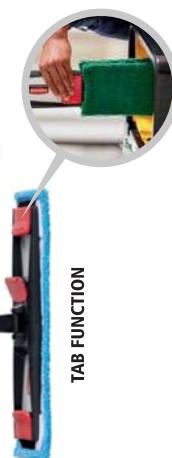

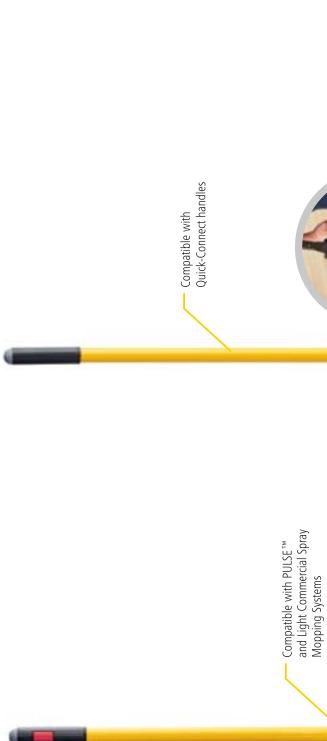

PLACE damp mops and/or cleaning solution to the Charging Bucket. The bucket design features an internal measuring guide to prevent oversaturation.

FLIP the Charging Bucket upside down and leave it upside-down for 5–10 minutes. The mops are now ready to use.

ADAPTABLE FLAT MOP

The wringable microfiber mopping system allows you to integrate microfiber mopping with your current cleaning process, while removing 99.7% or more of tested pathogens.*

TAB FUNCTION

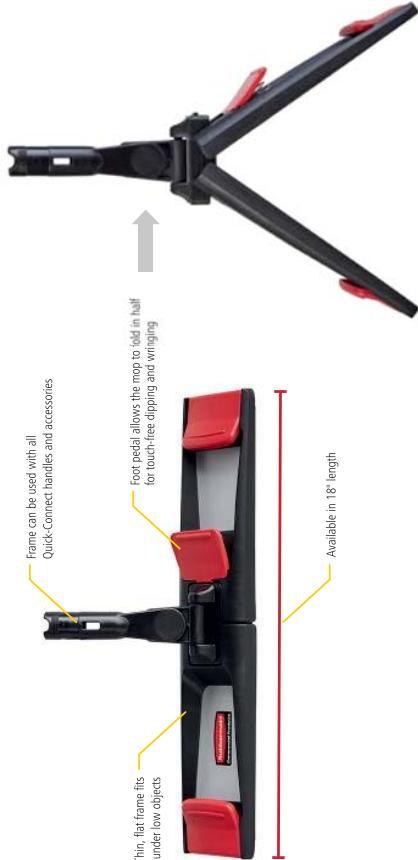

POCKET FUNCTION

Convenient clips help avoid contact with soiled mop pad during disposal.

FGQ87100BL00	HYGEN™ Flexi-Frame Glass Pad Cover	Blue	8.9" × 5.9" × 0.3"	12

SPECIALTY MOPS**FLOW™ SYSTEM**

High-capacity backpack and handle system allows user controlled release of solution for more efficient floor finishing.

Red ergonomic trigger handle on the mop frame dispenses finish solution with each press.

Straps distribute weight onto user's hips instead of shoulders, reducing strain.

Holds 1.5 gallons for finishing up to 3,000 sq ft of floor surface.

FLOW FINISHING SYSTEMS

NO.	DESCRIPTION	COLOR	L × W × H	PACK QTY
FGQ97900Y100	FLOW Flat Mop Finish Kit	Yellow	56.0" × 9.7" × 3.7"	1

FINISH MOP SYSTEM

The Flat Mop Finish System helps ensure controlled absorption and release of finishing solution for optimal floor care.

Resealable Finish Bucket keeps finish fresh until the next job, saving clean-up time.

Delivers 200-300 sq ft of coverage with a single mop load of finish solution

Nylon Flat Mop Pads are designed to provide the smoothest finish application.

GETTING STARTED:

1. **CLEAN** the laundry machines daily, before the first use.
2. **SEPARATE** Microfiber cloths and mops from other textiles.
3. **WASH** Microfiber cloths and mops in the Mesh Laundry Net to manage inventory.
4. **DETERMINE** detergent and maximum load size using chart below.*

DETERGENT AND LOAD SIZE BY MACHINE

WASHER SIZE	MAX VOLUME	DETERGENT LOAD**	18' MOPS PER LOAD
60 lbs	71.8 gal	1.5 oz	130
81.6 lbs	97.8 gal	2.0 oz	175
101.4 lbs	121.3 gal	2.5 oz	220
125 lbs	150.6 gal	3.1 oz	270
141.4 lbs	169.6 gal	3.5 oz	305
174.8 lbs	201 gal	4.5 oz	375

LAUNDRY INSTRUCTIONS

COMMERCIAL WASHING:

HOT WATER METHOD

- Wash in hot water (160°F/71°C)
- For 25 minutes!

- Use detergent and load size by machine guide to select appropriate capacity setting
- Use bleach if necessary

COMMERCIAL WASHING:

COLD WATER METHOD

- Wash in cold water
- Use detergent and load size by machine guide to select appropriate capacity setting
- Bleach is required at 50-150ppm*

COMMERCIAL DRYING

- Dry cloths and mops on low heat (130°F/54°C) setting
- Cube Truck

REQUIRED CARE

- Do not store cloths and mops in a washing machine overnight
- Do not use fabric softener in the wash cycle
- Do not use dryer sheets in the dry cycle
- Do not wash cloths and mops with other textiles

TRANSPORTATION

CONTAMINATED TEXTILES

- Remove dirty textiles from the dryer immediately
- Transport clean textiles in a properly cleaned blue Cube Truck with Cover or X-Cart with Cover
- Store clean textiles for only short periods of time. Wrap clean textiles for long-term storage
- Distribute textiles back into facility

OR

Always follow the protocol as directed by your facility manager.
Per CDC Guidelines for healthcare facilities,
Follow manufacturer instructions for bleach use.

*Machine settings can be established by chemical provider.
**Represents the average manufacturer's detergent recommendation.
Always use amount of detergent as directed in manufacturer's instructions.

PRODUCT CARE

Please reference CDC guidelines for laundering and cleaning microfiber cloths and pads as it is essential to ensuring the life span and efficacy of the fibers.
