# SinkMate PLUS

Warewash Solutions

## KEY BENEFITS:

- Tool-less Components – ¼ turn connections; double O-ring design
- Snap-on Cover
- Intuitive 1/4 turn handles with an easily serviceable diaphragm design.
- Engines slide into snap-guides for easy service and re-configuration
- Easy-service diaphragm with ¼ turn cover
- Compact footprint
- Both Aire-Gap and Flex-Gap back flow devices to meet national and local codes

The SinkMate Plus family of dispensers are the industry's most flexible and field serviceable. Available in one or two engine cabinet designs that feature 1/4 turn handles. The cover and internal components all utilize a simple yet effective tool-less design for easy serviceability and adaptability. Tools are only needed to mount the backplate to a wall using the included screws and anchors. The built-in flow regulating technology assures accurate dilutions even with fluctuating water pressures.

Prefer the water coming in from the left instead of the right? No problem! A quarter turn of the water quick-connect allows it to be quickly swapped with the quick-connect plug. Wish to connect both hot and cold water to a two engine cabinet? No problem! Slide the engine assembly out of the snap guides. With a twist of the wrist, remove the connector between the engines and replace with a quick connect plug on each engine. Add an additional quick-connect water connection to the opposite side. You can now utilize hot water for the detergent and cold water for sanitizer through the same cabinet!
